Our Program provides placement opportunities for districts needing:

1. Interim placement for moderate to severe mental health challenges and school disruption issues interfering with student success and school participation;
2. Placement for students undergoing eligibility determination for special education services;
3. Functional behavioral assessments and placement recommendations completed by a highly trained clinical team.

Alternative Education Program

Where students learn to make healthy decisions, enjoy learning, and develop meaningful relationships.

Adolescent Treatment Program (13-17 years):

Designed for students requiring a long-term (one year or more), highly structured therapeutic program emphasizing positive behavior modeling, cognitive training, academic achievement, and pro-social development. Students are provided with services according to IEP recommendations, social-emotional and achievement areas with a goal of transitioning to a less restrictive setting.

Adolescent Occupational & Treatment Program (16+ years):

For students preparing to meet MCAS requirements, develop social competence, explore occupational options, employment opportunities, and/or prospects for continued education.

Combined Latency Diagnostic & Treatment Program (10-12 years):

For younger students, combining central services of the diagnostic and treatment components of the adolescent programs, preparing students for reintegration into less restrictive settings. We include academic and positive behavior modeling of age-appropriate expectations.

Individual and Group Counseling (LMHC), Licensed Educators (DESE)
